

Opendoor Access Control Software

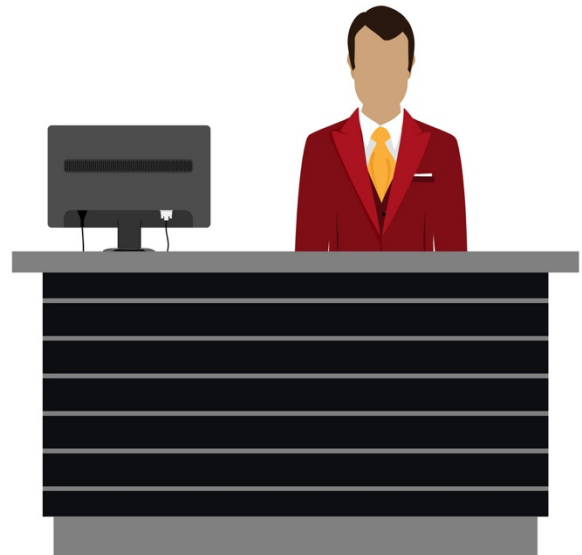

Overview:

The Opendoor Access Control system is the ideal solution for all type of properties, ranging from hotels to student accommodation. It is the most secure solution and flexible solution on the market in regard to access control integrating with energy management systems and streamlining operations at your property.

Applications:

- Hotel, spa resort & Leisure complex
- Student accommodation
- Residential accommodation
- Commercial office block

Features:

- Mobile Access compatible
- Full audit trail
- Individual lock access records
- Granular security levels
- Granular access times
- Ability to block individual cards
- Multiple building management
- Manages unlimited number of locks
- Complete access management of both guests and staff access
- Interfaces for Property Management Systems (PMS)
- Ability to cut keys on a door lock in the event of a system failure
- Mechanical key override in the event of an emergency

Security:

We use two step verification, which is an extra layer of security that requires a software dongle to be used on the computer that is cutting the guest card. The software dongle is coded to the licence key for the individual hotel. So even if the software dongle is stolen it will not work in another computer. This is a similar system to the hardware tokens, issued by banks to use with cards when looking to complete Internet Banking transactions.

Our key card cutters are also unique and are individually coded, so they cannot be purchased from anyone apart from ourselves. If a key cutter is stolen it will not work on another computer.

Opendoor Access Control Software

System Requirements for Opendoor Software

- Supported Operating Systems Windows 11
- 2 available USB ports (one for a key cutter and one for a security Dongle) The USB ports must be fully accessible by our software
- Database MySQL (port 3310 must be open)

Multiple Workstation configuration

For a multiple workstation configuration each PC must be networked (Not WiFi) and each PC will have the Opendoor Client software installed. Each client will access the database on the master PC. The master PC can be a client workstation as well. A key cutter and security dongle will need to be attached to each workstation.

Audit/Data trial function:

The lock set has the ability to store 1000 transactions of which token (card, fob, wristband, mechanical key etc.) opened the door at what time & date. In addition, the lock set also records when the door was opened from inside.

Remote Support:

We use TeamViewer for providing remote support and doing regular back up's of your database. If you prefer to not give us access it is critical you back up your Opendoor database on a weekly basis. TeamViewer access can be either unattended or controlled by the hotel / IT Dept.
